

EXPERIMENT-5

Name: S. Mahalakshmi

Roll No: 240701301

Conduct task analysis for an app and document user flows. Create corresponding wireframes using Lucidchart

USER FLOW WORKFLOW

Tools used to create user flow diagram – **Lucidchart**

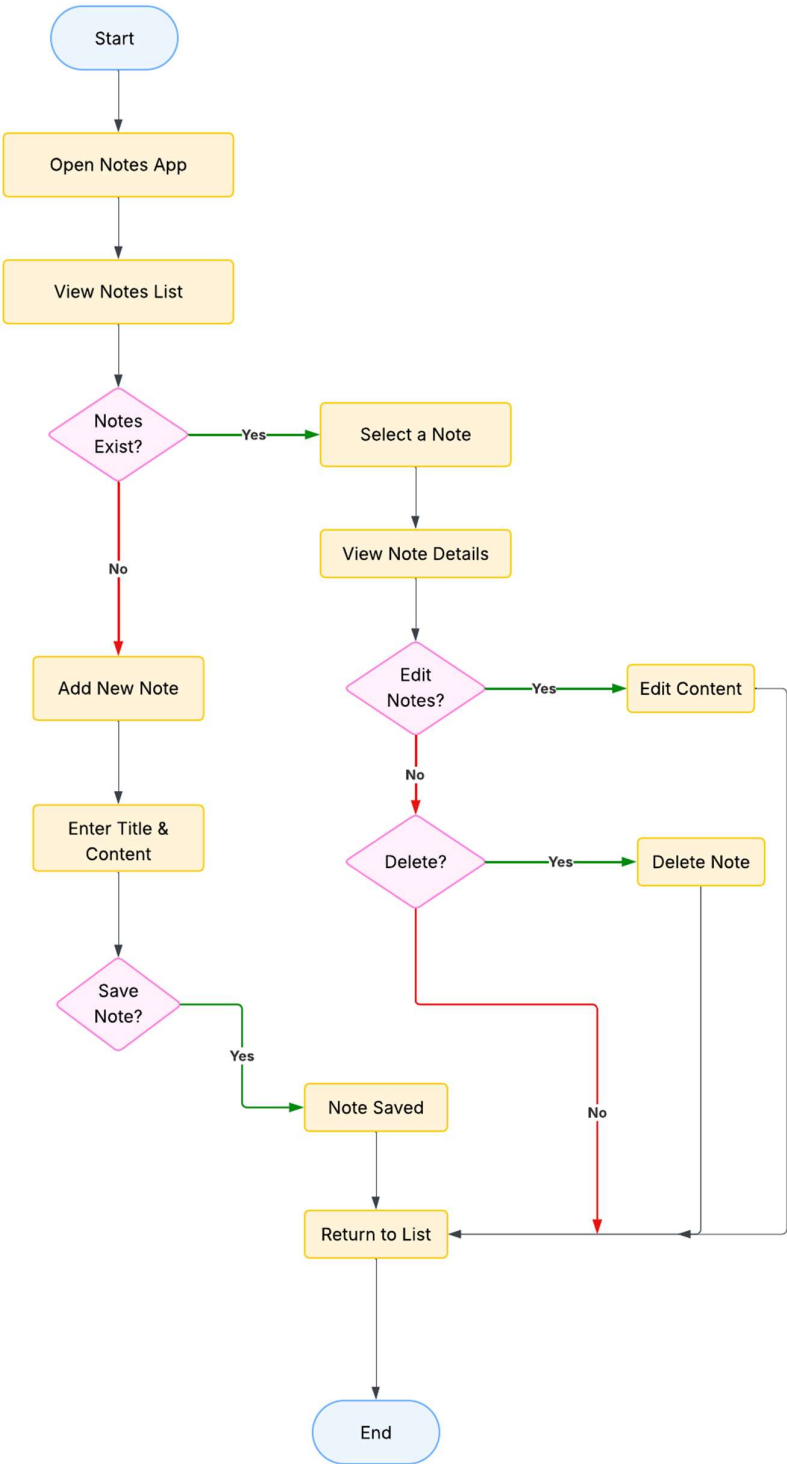

The application designed for this experiment is a Notes Management Application.

The application follows a simple workflow where users interact with their notes through a list structure.

The workflow of the application follows these steps:

1. The user opens the Notes application.
2. The system displays the list of saved notes.
3. The user can choose to create a new note or open an existing note.
4. If the user selects **Add Note**, they enter a title and content.
5. The note is saved and returned to the notes list.
6. If the user selects an existing note, the system shows the note details.
7. The user can edit the note or delete it.
8. After editing or deleting, the user returns to the notes list.

This workflow ensures that users can easily manage their notes with minimal steps.

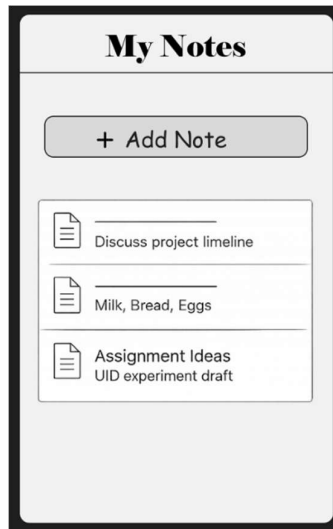

WIREFRAME DESIGN

Wireframes were created to represent the interface layout of the application. The design focuses on simplicity and clear navigation.

The following wireframes were created:

SCREEN 1: NOTES LIST (HOME PAGE)

This screen displays all the user's saved notes.

Users can scroll through the notes list and select any note to view its details or create a new note.

SCREEN 2: ADD NEW NOTE

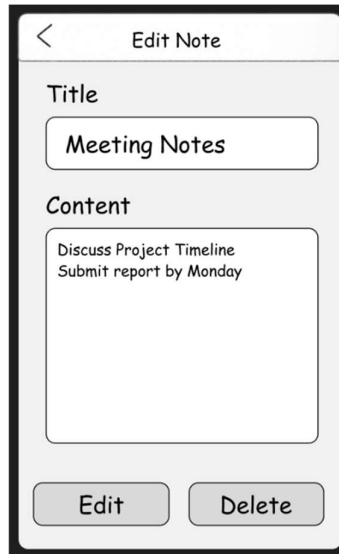

This screen allows users to create a new note.

Users enter the note title and content and click **Save** to store the note.
After saving their work they are directed to the screen where they can view their saved note.

SCREEN 3: NOTE DETAILS

This screen displays the full content of a selected note.

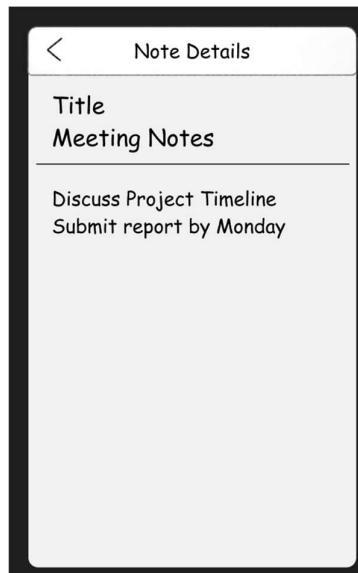

The screenshot shows a mobile app interface for editing a note. At the top, there is a header bar with a back arrow and the text "Edit Note". Below the header, there are two main sections: "Title" and "Content". The "Title" section has a text input field containing the text "Meeting Notes". The "Content" section has a larger text input field containing the text "Discuss Project Timeline" and "Submit report by Monday". At the bottom of the screen, there are two buttons: "Edit" and "Delete".

Users can read the note and choose to edit or delete it.

SCREEN 4: EDIT NOTE

This screen allows users to modify an existing note.

The screenshot shows a mobile app interface for viewing note details. At the top, there is a header bar with a back arrow and the text "Note Details". Below the header, there are two main sections: "Title" and "Content". The "Title" section has a text input field containing the text "Meeting Notes". The "Content" section has a larger text input field containing the text "Discuss Project Timeline" and "Submit report by Monday".

Users update the note information and save the changes.

EVALUATION AND ANALYSIS

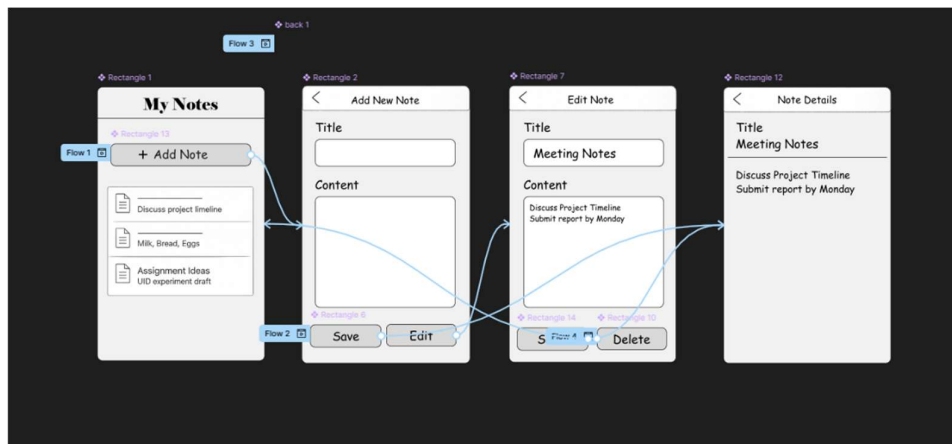

The designed user flow simplifies note management by reducing the number of steps required to perform actions.

Key usability advantages include:

- Simple navigation between screens
- Minimal decision points
- Clear interface layout
- Efficient note creation and editing

The workflow ensures that users can perform common actions such as adding, editing, and deleting notes quickly.

The wireframes effectively represent the application structure and interaction flow.

The above diagram clearly shows the navigation of the wireframe from one screen to another.

All the four screens in the wireframe are interconnected and can be revisited by the user's requirement.
