

EXPERIMENT – 6

NAME: S. Mahalakshmi

ROLL NO: 240701301

AIM

To simulate the life cycle stages of UI design using the RAD model and develop a small interactive interface using Axure RP.

DESCRIPTION

The Rapid Application Development (RAD) model focuses on quick development and iterative design through user feedback. In this experiment, a **Task Manager application** was designed and prototyped using Axure RP. The application allows users to log in, view tasks, and manage daily activities through an interactive user interface.

RAD MODEL STAGES

1. Requirement Planning

In this phase, the basic requirements of the application were identified.

- Application: Task Manager
- Target users: General users who want to manage daily tasks
- Key features:
 - User login system
 - Dashboard to view task summary
 - Task list with completion status

This stage helped in defining the overall structure and functionality of the application.

2. User Design

In this phase, the user interface was designed using Axure RP. Multiple screens were created to represent the application workflow.

Screen 1: Splash Screen

- Displays the application name “Study Planner” / Task Manager
- Includes a loading message
- Automatically redirects to the login screen after a delay

Screen 2: Login Screen

- Contains input fields for email and password
- Includes a “Sign In” button
- Designed with a background image and centered layout
- Navigates to the dashboard upon clicking the button

A login screen mockup with a light blue background featuring large, faint circular patterns. The text "Login here" is centered at the top in a bold, blue font. Below it, the text "Welcome back you've been missed!" is centered in a smaller, black font. Further down, there are two light blue input fields, one labeled "Email" and one labeled "Password". Below the password field, the text "Forgot your password?" is displayed in a small, blue font. At the bottom, there is a blue "Sign in" button with a small yellow lightning bolt icon in its top right corner.

Login here

Welcome back you've been missed!

Sign in

Screen 3: Dashboard

- Displays welcome message and task summary
- Includes a search bar and task overview cards
- Shows progress indicator for tasks
- Bottom navigation bar with icons (home, calendar, settings)
- Allows navigation to other sections of the app

Screen 4: Tasks Screen

- Displays categorized tasks such as “Today” and “Revision”
- Each task includes a checkbox for marking completion
- Includes a back button to return to the dashboard
- Maintains consistent design with the dashboard

3. Construction Phase

In this phase, the designed UI was converted into an interactive prototype.

- Navigation links were added between screens
- Splash screen uses timed transition
- Login button redirects to dashboard
- Dashboard elements simulate real application layout
- Checkboxes provide interactive feedback for task completion

This phase focused on implementing functionality using Axure RP interactions.

4. Cutover Phase

In this phase, the prototype was tested and refined.

- All screen transitions were verified
- UI alignment and spacing were adjusted
- Interaction responses were tested
- Final prototype was reviewed for usability

RESULT

The life cycle stages of UI design were successfully simulated using the RAD model. An interactive Task Manager prototype was developed with multiple connected screens and functional interactions.

CONCLUSION

This experiment demonstrated how the RAD model can be effectively used for rapid UI design and prototyping. Using Axure RP, a functional and user-friendly interface was created, highlighting the importance of iterative design and user interaction in application development.
