

EXPERIMENT – 7

NAME: S. Mahalakshmi

ROLL NO: 240701301

AIM

To experiment with different layouts and colour schemes for an application and evaluate user feedback on aesthetics and usability using GIMP.

DESCRIPTION

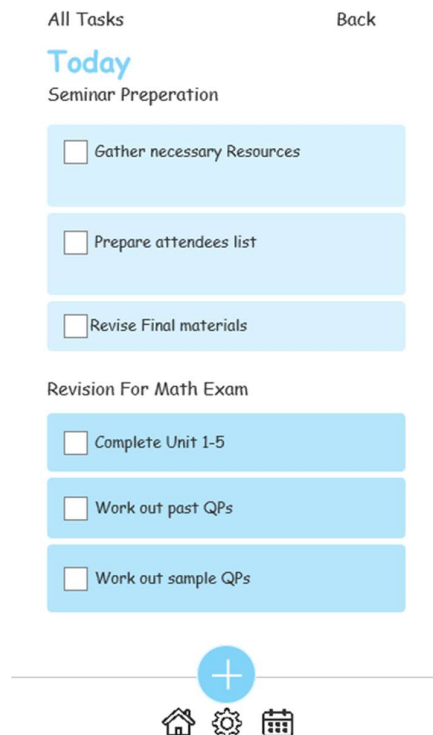

In this experiment, different visual variations of a Task Manager application were created using GIMP. The aim was to analyse how changes in colour schemes and layout affect the usability and appearance of the user interface. The designs were modified from an existing prototype and evaluated based on user feedback.

DESIGN VARIATIONS

Three different versions of the Tasks screen were created:

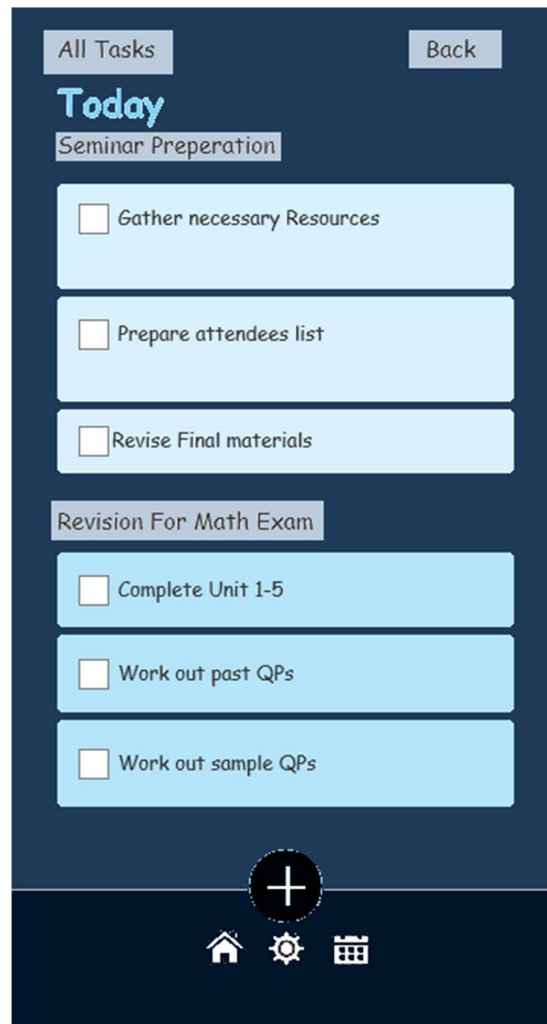

1. Light Theme

- Uses a light background with blue task cards
- Clean and simple interface
- High readability and minimal distractions

2. Dark Theme

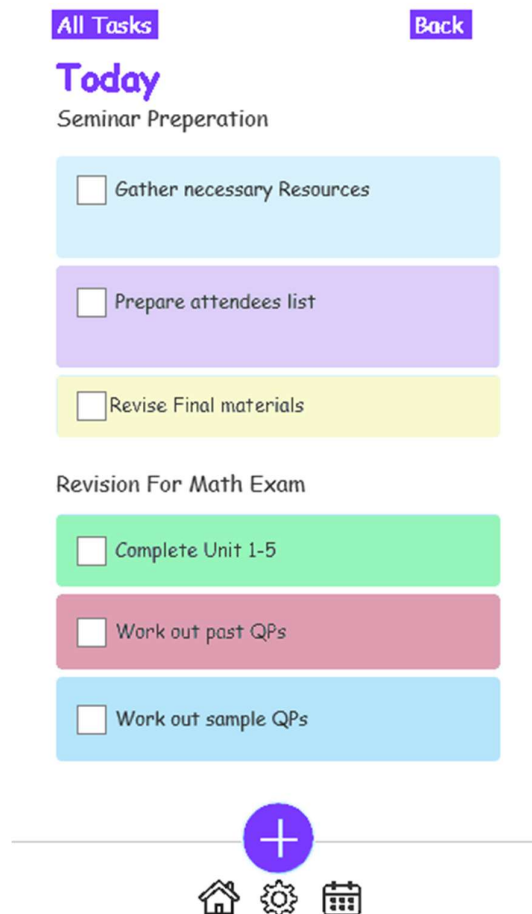

- Background changed to dark blue/black
- Task cards kept in lighter shades for contrast
- Provides a modern look and reduces eye strain

3. Colourful Theme

- Task cards assigned different colours (green, purple, yellow, etc.)
- More visually appealing and vibrant

- Slightly reduces consistency and readability

LAYOUT CONSIDERATION

Although the basic structure remained the same, minor adjustments in spacing and alignment of elements were considered during the design variations. These changes weren't made as doing so resulted in inconsistency in the design as it wasn't possible to that in GIMP.

USER FEEDBACK

Feedback was collected from multiple users regarding the different design variations. Most users preferred the **dark theme** as it was easy on the eyes and provided a more modern appearance. Some users preferred the **light theme** because of its clean layout and better readability. The **colourful theme** was considered visually attractive; however, a few users felt that it reduced consistency and made the interface slightly confusing. Overall, simpler and more consistent designs were found to be more usable.

ANALYSIS

- Light theme provides better clarity and simplicity
- Dark theme improves comfort and modern appearance
- Colourful theme enhances visual appeal but reduces consistency

RESULT

Different layouts and colour schemes were successfully experimented using GIMP. User feedback was collected and analysed to evaluate the effectiveness of each design variation.

CONCLUSION

This experiment demonstrated that colour schemes and layout significantly impact the usability and aesthetics of a user interface. While colourful designs improve attractiveness, simpler and consistent themes provide better usability. GIMP proved to be an effective tool for modifying and comparing UI designs.
