

EXPERIMENT – 8

Name: S. Mahalakshmi

Roll No: 240701301

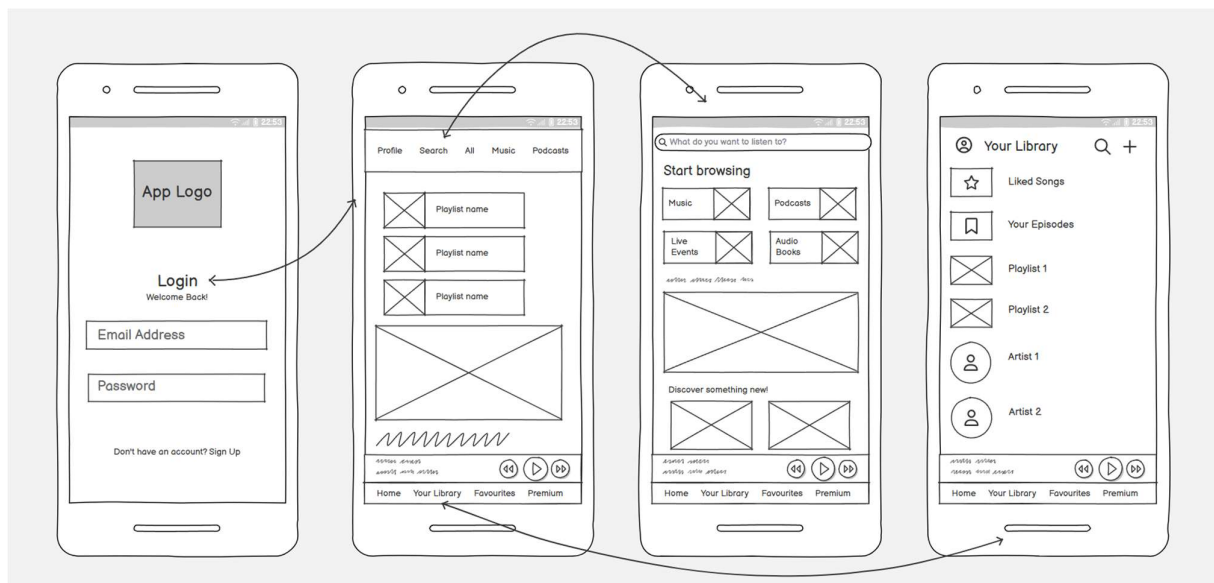

AIM:

The aim of this experiment is to create a storyboard that represents the user flow of a mobile application using Balsamiq. The storyboard helps in understanding how users navigate through different screens and interact with the application.

APPLICATION DESCRIPTION:

In this experiment, a **music streaming mobile application** is considered. The storyboard represents how a user logs into the application, browses content, accesses their library, and views playlists.

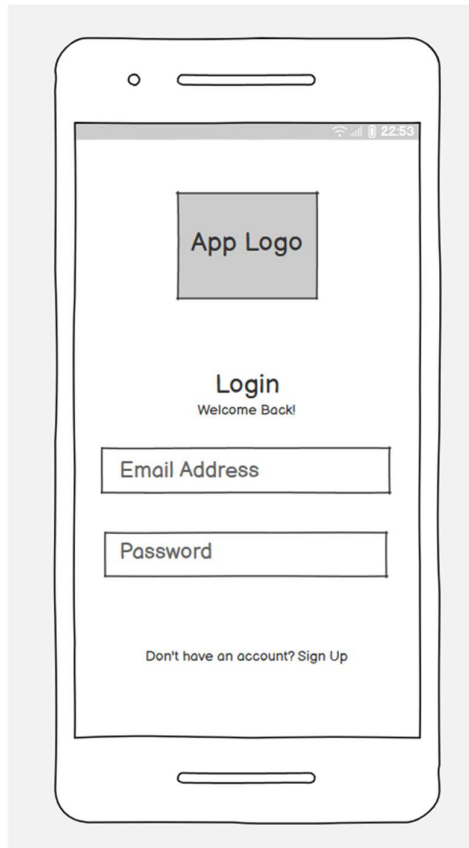

STORYBOARD DESIGN:

SCREEN 1: LOGIN SCREEN

Description:

This is the first screen where the user logs into the application.

Features:

- App logo
- Email address input field
- Password input field
- Login option
- Sign up option for new users

User Interaction:

- The user enters email and password
- Clicks on login to access the application

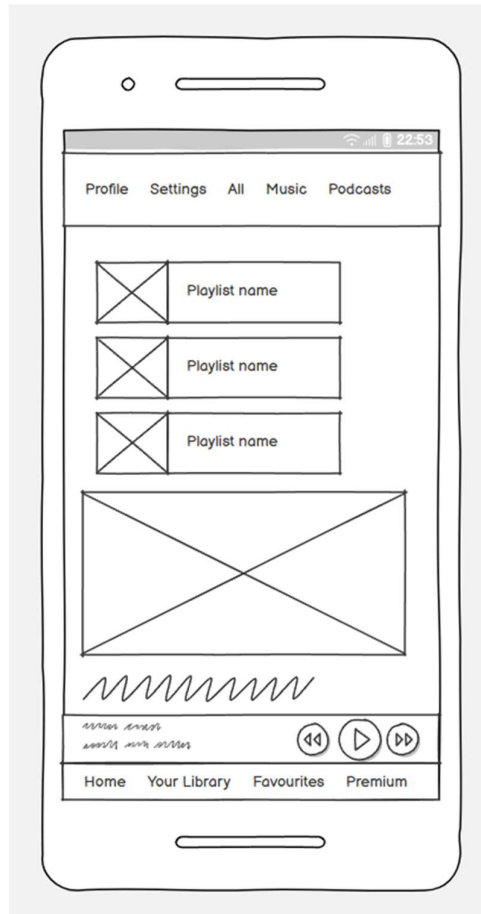

Purpose:

This screen allows the user to securely access their account.

SCREEN 2: HOME / BROWSE SCREEN

Description:

This screen allows the user to explore music content.

Features:

- Search bar
- Categories like Music, Podcasts, Live Events, Audio Books
- Recommended content section
- Bottom navigation bar

User Interaction:

- The user searches for content
- Selects categories or recommended items

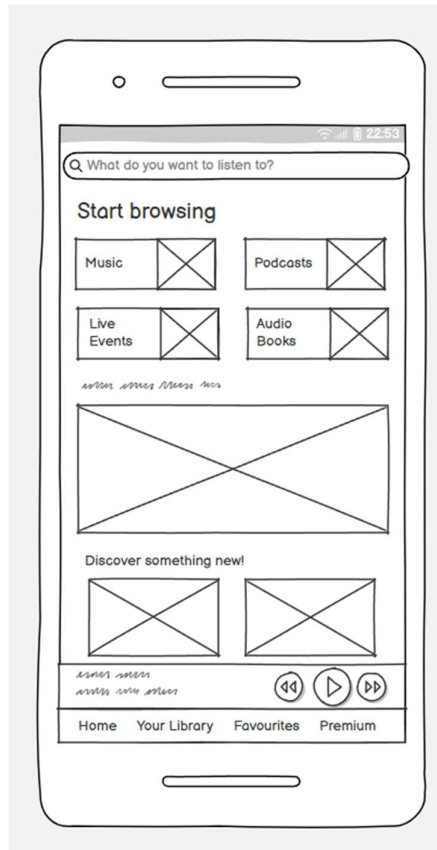

Purpose:

This screen helps users discover and browse available content.

SCREEN 3: LIBRARY SCREEN

Description:

This screen displays the user's saved content.

Features:

- Liked songs
- Saved episodes
- Playlists
- Artist list
- Search and add options

User Interaction:

- The user selects a playlist or artist
- Navigates to specific content

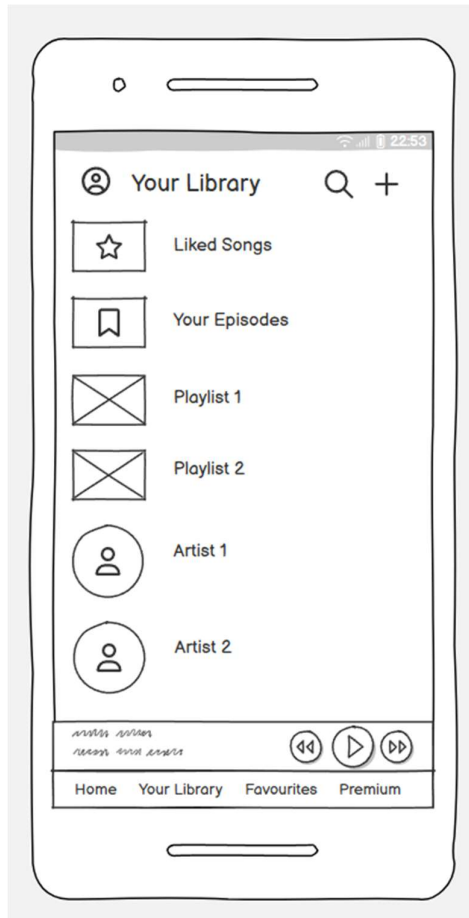

Purpose:

This screen allows users to manage and access their saved music.

SCREEN 4: PLAYLIST SCREEN

Description:

This screen shows the contents of a selected playlist.

Features:

- Playlist name
- List of songs
- Music categories (All, Music, Podcasts)
- Media control buttons

User Interaction:

- The user selects a song
- Plays or controls music

Purpose:

This screen enables users to view and play songs from a playlist.

RESULT

The storyboard for the music streaming application was successfully created using Balsamiq. The user flow from login to browsing and accessing playlists was clearly represented.

CONCLUSION

This experiment demonstrates how storyboards help in visualizing user interaction and navigation flow in an application. It improves understanding of how different screens are connected and enhances the overall user experience design.
