USER INTERFACE AND DESIGN

COMAPARSION OF UI DESIGN BETWEEN TWO FIGMA
CREATION

Bad Design:

Reasons:

1. Poor use of screen space

- Large empty areas are left unused while important elements are pushed far apart.
- Users must move their eyes excessively to understand the page.

2. Unclear hierarchy of information

- Coffee categories, navigation buttons, offers, and account actions all appear with similar visual importance.
- There is no clear starting point for the user.

3. Misplaced navigation elements

- Navigation options such as **Home**, **Cart**, and **Shop** are placed in the middle of the page instead of the header.
- Users expect navigation to be consistent and easily discoverable.

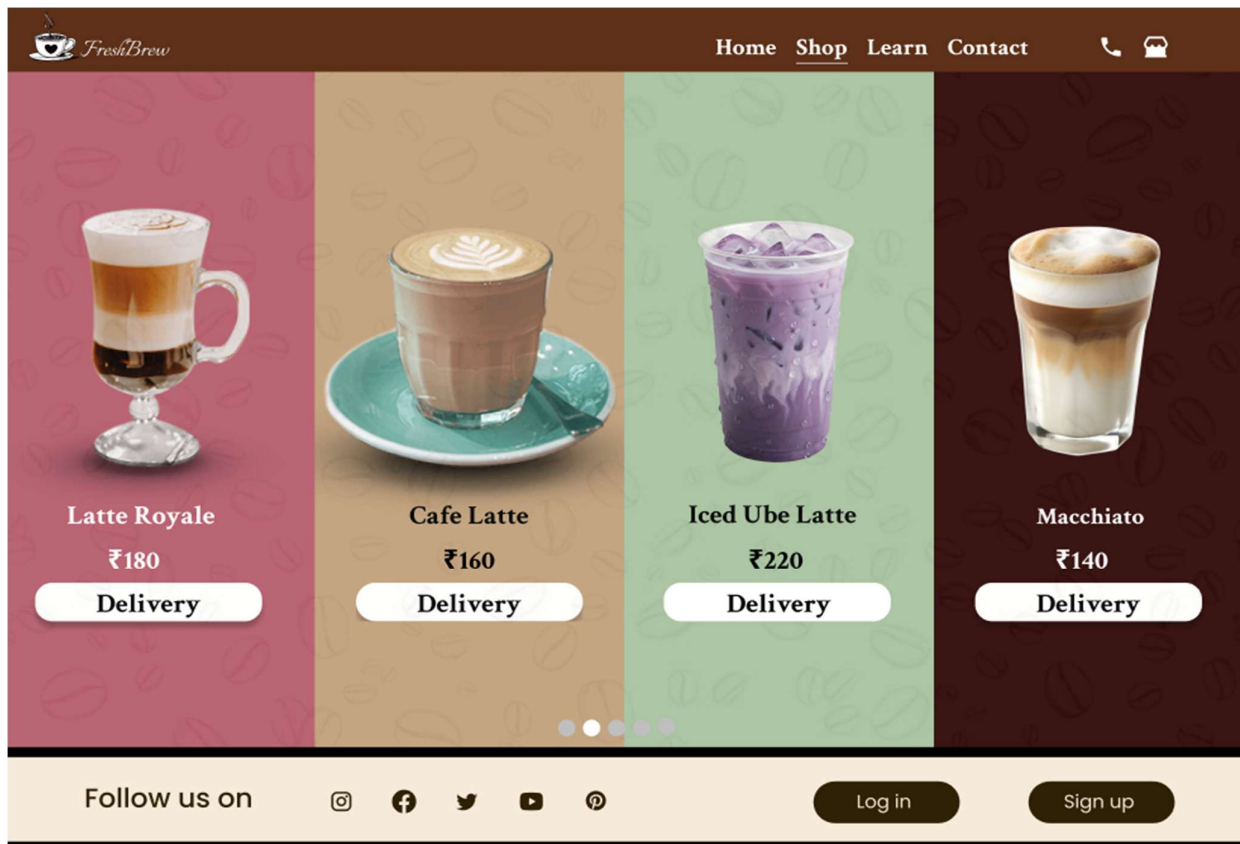

4. Large category blocks without context

- The blocks labeled “Lattes”, “Espresso”, and “Macchiato” are visually heavy.
- They do not explain whether they are:
 - categories
 - featured items
 - clickable buttons

5. Aesthetic simplicity hides functional confusion

- The color palette is calm and visually pleasing.
- However, simplicity is used without clear structure.

Good Design:

Reasons:

1. Clear visual hierarchy

- The header contains all primary navigation links in one place.
- Product cards are the main focus and immediately draw attention.

2. Centralized and consistent navigation

- Navigation links (Home, Shop, Learn, Contact) are placed in the header.
- Icons reinforce meaning without adding clutter.

3. Well-defined product cards

- Each coffee item is presented with:
 - image
 - name
 - price
 - delivery button
- All cards follow the same structure.

4. Effective use of imagery

- High-quality images help users quickly recognize products.
- Visuals support decision-making instead of distracting from it.

5. Logical grouping of information

- Related elements (product name, price, action) are grouped together.
- Footer content is separated from primary actions.

6. Reduced cognitive effort

- The page guides the user naturally from browsing to ordering.
- No unnecessary repetition of actions.

Key Differences:

1. Visual hierarchy

- **Bad design:** Everything looks equally important, so users don't know where to look first.
- **Good design:** Clear focus on products; header, content, and footer are visually distinct.

2. Navigation structure

- **Bad design:** Navigation is scattered (top, middle, bottom).
- **Good design:** Navigation is centralized in the header and easy to find.

3. User flow

- **Bad design:** Users are unsure what action to take next.
- **Good design:** Users are naturally guided from browsing → selecting → ordering.

4. Information clarity

- **Bad design:** Categories and buttons lack context and explanation.
- **Good design:** Each product clearly shows image, name, price, and action.
